Project Title: Virtual Try-On

<b>Work Done Till Now</b> <ul style="list-style-type: none"><li>- preprocessed the HR-VSTON dataset and applied VSTON-HO model but not get successful outputs.</li><li>- Tried another model Stable VSTON but not get the desired outputs</li><li>→ planned to implement Mediapipe library</li><li>- Research on how to use mediapipe library and how it works for Virtual Try on.</li></ul>	<b>Work planned to do today</b> <ul style="list-style-type: none"><li>- Start setting up Mediapipe in the project env.</li><li>- Explore and Test the Pose Estimation &amp; selfie Segmentation modules from Mediapipe.</li><li>- Identify key landmarks required for improved garment fitting.</li></ul>
<b>Work Done today</b> <ul style="list-style-type: none"><li>- landmarks detected using mediapipe.</li><li>- clothes overlap on the user's body, but cannot make perfect fitting as it takes the fix size of the clothes.</li><li>- It takes the length according to user's body but not take the width.</li></ul>	<b>Work to be done in Next 15 days</b> <ul style="list-style-type: none"><li>- Explore about how it take the perfect fitting over user's body.</li><li>- Try to take user's body measurement. So, it will help in recommendation of clothes of their size. (not sure about this point, but, will try).</li></ul>

## AI Project Hackathon (09-05-2025)

Which tasks you did after 12<sup>th</sup> April, 2025? Enlist them along with the success you would have obtained with challenges faced by you.

- Integrated mediapipe to detect key body landmarks.
- Detect body angle and position from a front-facing person.
- Resize and rotate T-shirt image to match the body.
- overlay the rotated T-shirt on the person.
- \* challenges :- T-shirt's doesn't perfectly align or scale to the person's body in some cases.
- overlap appears either off-center or in an unnatural direction.

### Work planned for today

- If live or accurate overlay fails, will switch to image-based simulation.
- If live overlay works, then will work on user's body measurement.

### Final Work Completed

- Live overlay works, clothes are overlapping on the human's body.

I/We assure to submit following things to consider the complete submissions of the AI project, by 15<sup>th</sup> May, 2025. Else, I/We know about penalty of marks.

1. Pending tasks of the project
2. All the codes in the github repository (Link of Github to be submitted)
3. Record video explaining the entire project (Public Link of the video uploaded over YouTube)
4. Project Report in the mentioned format

Signature of student(s):
